

KeepItSafe ONLINE BACKUP WITH VEEAM CLOUD CONNECT

KeepItSafe FEATURES

KeepItSafe presents Veeam Cloud Connect as a Backup-as-a-Service (BaaS) to enable organizations to access global data centers and a top-tier network of providers for a backup plan that allows strategic location and optimized access. Keys to your success with KeepItSafe include:

- ✓ Strong relationship with Veeam as a Gold Partner.
- ✓ 20+ years of experience and backed by a \$1.2 billion public company.
- ✓ End-to-end solution from configuration, and testing to production.
- ✓ Global data-center footprint across North America, Europe, Australia, and New Zealand.
- ✓ End-to-end 256-bit encryption for flexible, seamless transition to a secure cloud solution.
- ✓ Pay for what is used instead of over-provisioning for “peak.”

FAST, SECURE BACKUP TO THE CLOUD

The cloud is the new IT norm. As cloud adoption increases, resellers and service providers are competing to service opportunities. KeepItSafe® Online Backup with Veeam® Cloud Connect helps businesses to enter the cloud easily by providing online backups for local virtual guests and data. This cloud-based backup solution allows you to keep an up-to-date copy or secondary copy of your virtualized applications in a secure KeepItSafe repository, restoring files and virtual disks back to your local environment as needed.

VEEAM CLOUD CONNECT CLOUD-BASED ONLINE BACKUP

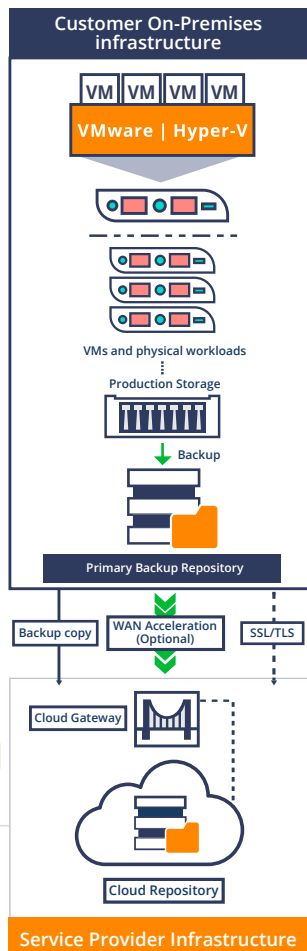

Veeam
Cloud Connect
It's the Cloud Made Easy

Cloud-based KeepItSafe Online Backup is the go-to solution for companies that need to protect their digital assets. A KeepItSafe Online Backup-as-a-Service (BaaS) with Veeam Cloud Connect delivers powerful and reliable features and functionality to help you avoid the risk of catastrophic data loss.

The most efficient way to get backups off-site

With Veeam Cloud Connect, you get:

- ✓ **Hosted off-site backups:** Get your physical and virtual backups off-site to a hosted cloud repository through a secure SSL connection.
- ✓ **Complete visibility and control:** Access and recover data in hosted backup repositories directly from the backup console; track cloud repository consumption and receive reminders for hosted storage renewals.
- ✓ **A modern backup architecture:** Leverage Veeam’s modern backup technology, including Backup Copy Job with built-in WAN Acceleration, forever incremental backups, GFS (grandfather-father-son) retention policies and more—all built into one product.
- ✓ **End-to-end encryption:** Rest easy by encrypting all data at its source (before it leaves your network perimeter), in-flight and at rest, without negatively affecting the data reduction ratios of built-in compression and WAN Acceleration.
- ✓ **Veeam Cloud Connect licensing:** Veeam Cloud Connect backup and replication functionality is included within Veeam Availability Suite™, Veeam Backup & Replication™, Veeam Backup Essentials™, and Veeam Agent for Microsoft Windows for all end-users. However, you will need to acquire a subscription to the appropriate computer and/or storage resources from a service provider of your choice in order to use it.

The 3-2-1 Rule

The 3-2-1 rule states that you need to keep 3 copies of your data, stored on 2 types of media, with 1 copy being off-site.

Getting backups off-site can be challenging due to limited bandwidth, exploding data sets, and a lack of resources required to build or maintain a true off-site backup repository.

With KeepItSafe Online Backup, you can master the 3-2-1 rule without dumping money and resources into a second site or adding bandwidth —just leverage the KeepItSafe cloud backup repository services.

VEEAM CLOUD CONNECT IT'S EASY TO ADD CLOUD BACKUP

Everyone needs a place to store backups off-site. But many organizations don't have a second site, and rotating tapes or removing media off-site is cumbersome. Increasingly, customers are turning to the cloud as a better alternative. Get physical and virtual backups off-site and replicate VMs (virtual machines) without the cost and complexity of building and maintaining an off-site infrastructure. Veeam Cloud Connect makes it easy for Veeam customers to extend their infrastructure to the cloud with a fully integrated, fast and secure way to back up, replicate, and restore from the cloud.

How It Works

Veeam Cloud Connect integrates KeepItSafe Online Backup repositories (cloud repositories) directly into the Veeam backup console. Customers can easily click "Add Service Provider" and enter their credentials to join the KeepItSafe Online Backup cloud repository infrastructure. There's no VPN, and no separate console. Cloud repositories work like other backup repositories – except they're available even if the primary backup or data center is lost. With a single server and in just 10 minutes you can configure a cloud infrastructure for Veeam backups. That infrastructure includes a cloud gateway that:

- ✓ Virtualizes network traffic between you and your customers
- ✓ Securely transfers data over an SSL/TLS connection
- ✓ Uses a single port to simplify firewall configuration and eliminate the need for a VPN connection

Multi-Tenancy

Veeam Cloud Connect was designed from the ground up for your multi-tenant hosting environment. Cloud repositories are completely isolated from one another. Backups can be encrypted at the source before data leaves the network and without increasing bandwidth consumption. Unlike a general-purpose WAN accelerator, Veeam's Built-in WAN Acceleration maintains data reduction ratios even with encrypted data streams.

- ✓ Segment a single backup repository into one or more cloud repositories, each with its own specified tenant.
- ✓ Manage resource allocations and expiration dates for each tenant.

GET STARTED TODAY!

If you own Veeam Availability Suite™, Veeam Backup & Replication™, or Veeam Backup Essentials™, you're ready for KeepItSafe Online Backup with Veeam Cloud Connect. You just need to turn it on and acquire the necessary compute and/or storage resources. If you have either Enterprise or Enterprise Plus editions, you can accelerate your data transfer to the cloud by up to 50 times with built-in WAN acceleration to Veeam Cloud Connect targets, a special perk for Veeam Cloud Connect users.
