Cloud App Data Collection & Archival for Office 365, Google Apps & Box

Integrated Data Protection & Governance for Endpoints & Cloud Apps

Today's increasingly mobile enterprise has resulted in a loss of data control. Data on laptops and smartphones as well as within cloud applications, like Microsoft Office 365 (OneDrive and Exchange Online), Google Apps for Work (Google Drive and Gmail) and Box, translates to increased risk of company data loss and the inability to track, hold or monitor data for regulatory compliance and legal obligations. KeepItSafe, with its endpoint and cloud app integration, enables enterprises to regain control and address these challenges by providing a centralized system for the management, governance and recovery of user data - no matter where the data resides.

### Easy System Connectivity

KeepItSafe Mobile integrates with Office 365 (OneDrive and Exchange Online), Google Apps for Work (Google Drive and Gmail) and Box, via its application programming interface (API). Admins simply connect to their cloud application service via the KeepItSafe Mobile administration panel and KeepItSafe Mobile starts collecting and scanning data by user.

Centralized Visibility Over Dispersed Data

With KeepItSafe Mobile, enterprises have a single access point for viewing and managing enduser data without having to scour across multiple disjointed systems to find it. By centralizing cloud application and endpoint user data and adding capabilities for richer data insights, KeepItSafe Mobile aids in adhering to corporate data policies and regulatory compliance requirements. These capabilities include:

- **Federated search** enables administrators to locate any file across all users, devices and cloud applications.
- **Tamper-proof user and admin audit trails** provide transparency, traceability and accountability into all activities in the organization for compliance initiatives
- **Automated compliance management** powered by full text search capabilities and built-in compliance templates (e.g. HIPAA, GLBA, PHI / PII related) to monitor for potential data risks and easily meet data regulations

Simplifying eDiscovery for Cloud Application Data

KeepItSafe Mobile integrates with Office 365 (OneDrive and Exchange Online), Google Apps for Work (Google Drive and Gmail) and Box, via its application programming interface (API). Admins simply connect to their cloud application service via the KeepItSafe Mobile administration panel and KeepItSafe Mobile starts collecting and scanning data by user.

- **Investigative access** enables IT and legal teams to locate, view, preserve and collect data without impacting custodians.
- **Built-in legal hold workflow** facilitates the collection and preservation of relevant custodian data for legal teams.
- **Secure file system access** enables ingestion into an eDiscovery platform directly from the KeepItSafe Mobile repository for further review by legal teams.
- **Forensic based collection and chain of custody** reporting to ensure legal admissibility and remove the risk of spoliation.

One Step Archiving of User Data

Managing data across multiple data sources means that holding and storing data for long term archiving becomes more complex for IT, as each system has its unique nuances. KeepItSafe Mobile enables the organization to centralize the data across sources, by user, and retain it for as long as necessary.

- **Retain all user data for as long as necessary** to meet corporate governance obligations
- **Search historically across data and audit trails** to identify data necessary for compliance responses
- **Protect data from accidentally being purged** by ensuring it's preserved even after employees depart

About KeepItSafe:

For more than a decade, KeepItSafe has been a world leader in cloud backup, disaster recovery and endpoint protection — serving more than 40,000 corporate customers, across four continents, and protecting over 50 petabytes of mission-critical data every year.

We offer a fully managed and monitored service for cloud backup, recovery and business continuity —and we are among the only global recovery providers awarded ISO 27001 certification for information security management.

Visit our website, www.KeepItSafe.com, to learn more about our industry-leading solutions for cloud backup, disaster recovery and endpoint protection. Or contact us anytime to schedule your free Network Evaluation and Data Protection Assessment, as well as to begin a free trial of our solution.
